

GENETICS

MAGIC TOOTH

21.08.2006

David Wang from the school of Dentistry of UCLA makes an astonishing claim in a company interview about the 1.5 l saliva that we produce every day: "...Real-time changes in our body could be monitored by having sensors to sense changes ... implant a tooth with a sensor ... that comes into the astronaut's oral cavity...". Even genomic and proteomic analytes are possible if we think of recent [lab on a chip](#) developments. Yea, yea.
