PLOS ONE – A WIKIPEDIA LIKE PUBLISHING SYSTEM?

7.08.2006

PLoS ONE may revolutionize science communication. Have a first look at www.plosone.org. As they write: “Be one of the first to appear in this new Open Access 2.0 online forum” and qualify for a great low pre-launch price. We’ll peer review your work and publish it online as soon as possible so that it can start a conversation within the community that will enhance scientific progress.” Will it still be traditional, 1:1 translated publishing system? Or can we even edit any text? What about lists of open questions? And a true synopsis – like the one theologians use to compare the four canonical gospels? Yea, yea.
