

GENETICS, PHILOSOPHY

SEE NO EVIL, HEAR NO EVIL, ...

21.08.2006

[“See no evil, hear no evil, do not evil: The lessons of immune privilege”](#) is the title of an excellent paper by Jerry Niederkorn in nature immunology. He basically says that there are only 3 human organs that allow foreign tissue grafts: eye, brain and pregnant uterus. If we leave the special situation of the uterus aside, and see the yes as an extension of the brain – there is only the brain that is not attacked by the immune self. Being still under influence of the [Popper/Eccles discussion](#) of the brain and its self, here is my back on the envelope picture of social self < -> immune self < -> conscious mind. Yea, yea.
