# A DATABASE DRIVEN EPIDEMIOLOGICAL QUESTIONNAIRE

7.11.2006

During a past project I moved from a paper-based questionnaire directly to a database version. This has the advantage of generating at the same time an online version (with some interface scripts) and an offline version (by using a serial paper printing).

The whole package is written in standard HTML with some Cold Fusion(R) extension (where you need the Railo(R) or Blue Dragon(R) interpreter too).

[Download](#) (md5:1922125540), create a datasource "aerzte" and attached the included Access(R) database. Then run the following script in your browser.
