GENETICS

HUGO CHANGING OFFENSIVE GENE NAMES

13.11.2006

<u>Hsien Hsien Lei</u> has a good comment on gene names approved by <u>Human Genome Organisation (HUGO)</u> Gene Nomenclature Committee which are nevertheless offending. Some of the inappropriate names are LFNG – lunatic fringe homolog (Drosophila), MFNG manic fringe homolog (Drosophila) as well as SHH sonic hedgehog homolog (Drosophila). There are many more names that arise only from a particular culture (like death executioner Bcl-2); it seems also a particular kind of humour to call a deaf mouse Beethoven. Yea, yea.
