CONVERT EXTERNAL MAPS TO OZIEXPLOER

7.11.2006

Many map software vendors like German TOP 50 do not include export functions. Printing, however, is usually not a problem.

I therefore suggest to use the print function for exporting map data. Just print your desired map area into a PDF file (TOP 50 nicely allows to set anchor points for that).

A PDF printer driver will be already installed on many systems (if not, please go to sourceforge and download [pdfcreator](#)). Write down the upper left and lower right GPS coordinates of your rectangle as you will need them later in OziExplorer.

You will need to download also two graphics packages: [netpbm](#) and [xpdf](#).

Move your PDF print export and all downloaded executables into one directory. After running the following script you will see a bmp file that can be imported and calibrated in OziExplorer. Happy navigating!

[ozi.cmd](#)
