# CLIMATE CHANGE

11.03.2007

There is no need for another diagnosis here. There is also no need about the impact of the automobile industry – I have published in 1993 the first large epidemiological study about traffic and [respiratory health](#) here in Munich.

What could we do? People need to move but need alternatives to public transport or 1000kg cars.

One such alternative is being the Swiss made twike [Twike](#) that I could get for a ride – excellent driving experience (quite fast too!) while needing only 0.5 l equivalent per 100 km. Although I am also attracted by recumbents and gyrocopters, this seems to be the best alternative ;-)
