

ALLERGY, JOKE

ALLERGY – EVERYTHING FROM FULLERENES TO CANNABIS

22.06.2007

Allergy research continues to be one of the most active research fields. New studies show that that [fullerenes](#) may inhibit the allergic response

Human MC and peripheral blood basophils exhibited a significant inhibition of IgE dependent mediator release when preincubated with C60 fullerenes.

as well as [tetrahydrocannabinol](#)

Cannabinoid receptor antagonists exacerbated allergic inflammation, whereas receptor agonists attenuated inflammation.

Sorry I am not going to replicate this studies, yea, yea.
