# ACCIDENTALLY DELETED FILES

10.09.2007

Only a couple of years ago, you could edit your file allocation table and replace all these fancy question marks in ?ecret.doc to undelete your files.

While importing now my holiday pictures from a SD card to Picasa 2, I accidentally deleted all files on the SD card as the hard disk ran out of space. After an adrenaline shot I recovered nearly all files with a free utility called "[Pandora recovery](#)". This may be a useful tip for you if you have a NTFS formatted partition; FAT32 will not work...
