THUNDERBIRD SECURITY IMPROVED

19.09.2007

A new [plugin lets you immediately verify the sender](#) by comparing the From: line and sending IP of emails against the published Sender Policy Framework (SPF) and DNS-based reputation lists. Verifying addresses may prevent you from phishing attacks which is not such a bad idea.

BTW if you want to add the date in the reply header just change
\\Programme\\Mozilla Thunderbird\\defaults\\pref\\mailnews.js from

```
pref("mailnews.reply_header_type", 1);
```

to

```
pref("mailnews.reply_header_type", 2);
```
