

SOFTWARE

# DR. RER. PHOTOCOP.

14.11.2007

This is an old saying among medical students – you get your degree by copying a lot of papers.

When it comes to copy music I learned only recently that it makes a difference which software you are using to create a mp3 from your CD. [Exact audio copy](#) reads audio CDs almost perfectly while some other software does a jitter correction on scratched CDs. Differences can be really heard!

Back to photocopies – when I visited the largest medical library in Germany, the ZMB in Cologne, I was deeply impressed by all the students wearing headphones and sun glasses while copying pages hour by hour, an eldritch scenery, yea, yea.
