

GENETICS, SOFTWARE

GAGGLE NOT GOOGLE

23.01.2008

This is about [Gaggle](#) that I came across only very recently in a new [Cell paper](#) on predictive models of transcriptional control. It is not about Google; is it really true what the last Edge issue writes

Google, which has been acquiring companies at the rate of about one a week, has disclosed that its ultimate goal is to “store 100% of user data.

Gaggle is an excellent resource and there is even a [R goose](#) to explore now in more detail. As always write your search terms correctly otherwise the 100% giant will even know that you are searching also Zozle. BTW don't forget to send a letter of support to [Galaxy](#) who need to renew their funding.
