# ZOTERO MINISERVER

31.01.2008 1 COMMENT

Here is a proof of principle project that can be further adjusted to your own needs - a simple server script that can look up your most recent Zotero database entries and display them to the world. When run in a DOS or Linux box as *ZoteroServer path/zotero.sqlite* it will display the most recent entries to clients listening at *localhost:8888*. The code should be pretty straightforward and may be replaced with even other items.
