CREATE YOUR OWN GARMIN VECTOR MAP

12.04.2008

It turned out to be a tricky job to move from pixel maps to [a Garmin vector map](#); I first thought that is [impossible](#) but here is a way to do that:

1. Find the area of interest with [Geocoder](#)
2. Get digital elevation data from [de Ferranti](#)
3. Import them in [3DEM](#), export as GEO-TIFF, import in [DEM2TOPO](#) and export in Polish map format.
4. Finalize with [Mapedit](#). Mapedit will read Polish format, import your already available GPS tracks or positions saved in Oziexplorer. The best Mapedit feature is certainly the Google Earth overlay. Nevertheless map editing remains a time consuming enterprise but may be the only way if there is no other map available. I wish there would be more of these maps like for [Iceland](#) or [Garda Lessinia](#).
