

GENETICS

A MAN WITH A FEMALE DNA

21.10.2008

[Local newspapers just report a suicide](#) - where the corpse had to be identified in the [forensic department](#). Skin cells turned out to be male, blood cells to be female. The solution to this paradox was quite simple - the victim had a bone marrow transplant in the past.

Maybe that's not such an unusual case with 17,600 BM transplants here since 1998? And maybe I should add that to my "denano" paper currently under review?
