

JOKE, VIDEO, VITAMINS

YES, WE CAN

30.12.2008

Sorry, I did not find the time to write so much here during this month. I have been revising manuscripts (on asthma genetics and another on the history of vitamin D introduction), traveling to another visit in [Bolzano](#), a meeting in Barcelona and a retreat at [Seeon](#). At present I am analyzing methylation patterns of CYP genes and are working on a [talk in March 2009](#) a rebuttal of Collins "Language of God" which requires a [lot of reading](#). There are also many more books on my desk - Fuller's dissent, Geert Maaks' Europa, and a fancy books on English proverbs - and so many distractions with interesting video on demand ([odooTV](#) / [fotoTV](#) / [Heidenreich](#) ...) And of course there is plenty of work with sorting this year pictures and mp3s and playing with the children ... I want to connect my MBA also to the piano ([which finally works](#)), the DSLR (should be [possible](#)) and my mobile (which works only occasionally) - and I want to keep also pace with the [running success in 2008](#) there is no spare time left.

This may be, however, a good occasion to present now all my best wishes for 2009 to friends and family - Yes, we can, and [we shall overcome!](#)
