IWORK PAGES NOW SUPPORTS ENDNOTE X2

7.01.2009

Although many journalists have been disappointed from the last MacWorld keynote, there are some good news for scientists who like the clean writing style in Pages as it supports now also MathType and EndNote (so far I am using Lyx with BibTex as Zotero and NeoOffice were a dead end). So I will have to finish my next paper within the 30 day trial period which creates some time pressure, yea, yea.

Addendum

You need an immediate patch otherwise the system is largely unusuable.
