

ALLERGY, VITAMINS

PANDEMY OF VITAMIN D DEFICIENCY

25.06.2009

Yes, we know “slow virus is good for your lab as it keeps your lab running” with similiar mechanisms are being found in many research areas. Best of all – declare everybody as diseased (or at least at risk) like seen in [Vol 624](#) (sic!) of “Advances in Experimental Medicine and Biology”:

Vitamin D Deficiency Pandemic

It is estimated that one billion people world-wide are at risk of vitamin D deficiency.²³ Upwards of 30-50% of both children and adults in the United States, Europe, South America, Middle East and Far East are at risk.⁵⁹⁻⁷⁵ The major cause for this pandemic is the lack of appreciation of the beneficial effect of sunlight in producing vitamin D.^{3,23,75} In the sunniest areas of the world, vitamin D deficiency is common because of lack of adequate sun exposure.⁷⁰⁻⁷²

One billion humans with a serious disorder? Forget both Darwin and intelligent design? I think some people forgot how rickets looks like, yea, yea.
