PÂ‰0.0069 IN ELECTION RESULTS

9.07.2009

Too many "7" digits [were found for candidate A](#) in a study of the presidential election results.

This method is closely related to Benford's Law. A highly significant ($p \sim 0.0007$) excess of vote counts for candidate K that start with the digit 7 is found (41 observed, 21.2-22 expected).

I have to admit that I heard for the first time of the [Newcomb-Benford's Law](#) (NBL)...
