**GENETICS** 

## **BEST NGS ALIGNMENT VIEWER**

25.11.2009

<u>Heng Li</u> has an excellent overview table on next generation sequence alignment viewers (as well as alignment programs) – thanks to TB for pointing me to that site. The Broad Institute has just bought another 30 Illumina Genome Analyzer – they now own 89 so the Broad people might have clearly a need for visualizing data.

The best choice is not easy to make – I am trying now the <u>IGV</u> in my lung sequence project. Annother interesting piece of software not listed by the Heng Li table is <u>annoj</u> that looks promising too, yea, yea.
