USEFUL WORDPRESS MAINTENANCE SCRIPTS

27.12.2010

End of a year and time for some maintenance work.

And yes, I found a [nice plugin to convert all useless pages to posts](#) (sorry, there is no download page here anymore, it's all in the blog hierarchy).

It would be also nice to check my 3056 links over the past 4 years and it looks good, [what the link checker says](#)

The screenshot shows the WordPress dashboard for 'Science Surf'. The 'Broken Links' plugin is active, displaying 18 broken links. The interface includes a sidebar with navigation links like 'Super Admin', 'Dashboard', 'My Sites', 'Updates', 'Akismet Stats', 'Posts', 'Add New', 'Categories', 'Post Tags', 'Media', and 'Library'. The main content area shows a table of broken links with columns for 'URL' and 'Status'. The status for all listed links is '404 Not Found'.

URL	Status
http://www.schweitzer.org/german/asdind.htm	404 Not Found
http://www.tagesspiegel.de/berlin/archiv/11.10.200	404 Not Found
http://www.genvault.com/support/GenCode%20Pape	404 Not Found
http://www.vitamindcouncil.com/PDFs/Gilchres2t.pd	404 Not Found
http://www.msf.org/msfinternational/invoke.cfm?ob	404 Not Found

While the numbers slowly increase, I found that all broken links are being crossed out in the original posts, very handy!
