SOFTWARE

OPTIMIZED SSD UNDER OSX

7.04.2011

Having now a SSD in use for more than one year, here are my accumulated tweaks. The first one is Smart Sleep which greatly enhances sleeping/wakening time. Disabling the motion sensor ("sudo pmset -a sms 0") doesn't hurt but is isn't really necessary. Mounting the SSD noatime , however, gives a measurable performance gain. And at the end, I dropped that RAM thingy as it breaks with every system update.
