SYNC LION DESKTOP VIA ICLOUD

4.01.2012

While [all that sync'ing works quite well](#), I still have different desktops on my MacBooks. Here is a solution that is based on some undocumented feature of the iCloud that I have found at [macstories.net](#). It basically needs to activate the iCloud settings also for files which will give you in Lion access to a magic 5 GB ~/Library/Mobile Document folder very much alike to Dropbox.

I am rsyncing here now my Desktop folder by an automator action as described at [banana.com](#). Can be done in less than 5 minutes...
