WHO NEEDS A LEADER?

4.01.2012

asks a second-hand report in [Nature](#)” last week citing an earlier [PNAS study](#)

With no designated leader the players performed better, reaching lower errors in velocity of movement and stopping times [...] So, is having a leader really counterproductive? It depends. With novice players, Noy et al. obtained opposite results: these players performed much better with a designated leader.

Who is repeating this study in science and doing it not only in the theater?
