CIGUATERA

19.11.2016

I will have a paper in the next issue of the [MMW](#) describing a case report of Ciguatera in Cienfuegos / Cuba. [Seems to be a common phenomenon there](#) but unfortunately there is nothing in the Cuba guide books so far.

The pathology is [extremely interesting](#) – sodium channel activation by P-CTX. I only wonder why there are no therapeutic attempts with long-lasting class Ia aNa channel blockers Chinidin, Procainamid, Ajmalin, Disopyramid, Propafenon, Prajmalin. Or valproate for CNS activity.
