

SOFTWARE

SO MANY NEW LAYERS

3.11.2016

More recently, I have updated <http://cycleplanner.wjst.de> with many more custom layers. It's a bit cumbersome to find the best data sets out there while using it in leaflet is usually straightforward.

Open-

streetmap items work great with the [overpass api](#) which has a bit complicated syntax. Here is an example of an OR (union) query

```
var fuel = new L.OverPassLayer({  
  query:  
  "(node['amenity']='fuel')(BBOX);node['amenity']='fast_food'(BBOX);node['amenity']='kiosk'(BBOX););(._;&gt;);out;"  
});
```
