**PHILOSOPHY** 

## **RACIST COMMENTS**

3.02.2018

I just received a Google alert of a new paper that cites <u>our earlier work</u>. The authors describe a Twitter analysis"" <u>23andMe confirms: I'm super white</u>". It showcases a lot of noise ...

The two most popular DTC companies, 23andMe and AncestryDNA, also generate the most tweets. However, al-though 23andMe has half the customers, it produces almost 5 times more tweets, which is also due to controversy around their failure to get FDA approval in 2015.

## and even more noise

In particular, the "ethnic" breakdown provided by ancestry reports seems to spur several instances of negative sentiment tweets associated with racism and disapproval of multi-cultural/multi-ethnic values. For instance, a user with more than 3K followers self-describing as a "Yuge fan for Donald Trump", tweets: "Get this race mixing shit off my time line!!" in response to a 23andMe video about ancestry [...] Also, Twitter might be removing tweets with hate words as claimed in their hateful conduct policy. Nonetheless, we do find instances of hate speech, e.g., antisemitic tweets [...]

This what I already feared, the largely useless genetic testing is being misused for inferior interests. It is dangerous too, just read the recent <u>case history</u>.
