

GENETICS, JOKE

# DNA FRIEND

29.03.2019

There is a wonderful fake 23andme site <https://dnafriend.com>

## Our Values

DNA Friend didn't become the industry leader in free genetic testing by taking customer data and indiscriminately selling it to anyone who was buying—it took much more than that. It took a set of rock-solid values that still guide us to this day.

### Saliva

Saliva is our core focus. It's who we are. You entrust us with your spittle, and we don't take that responsibility lightly.

### Privacy

Your DNA is the most personal information there is. We only share your data with third parties who explicitly request it or who seem like they'd be pleased if it appeared in front of them.

### Speed

We believe in processing results in less than 24 hours so you can start making major life changes as soon as possible.

### Humanity

We never forget that every drop of saliva represents an actual human being with just as much right to his or her DNA information as anyone else.
