HOW TO INCLUDE A PDF IN REVEAL.JS

27.11.2019

Right now there is a lot of information out there [how to export a reveal presentation as PDF](#) but much less not how to include a PDF document. The most natural way would be some embed

```
<section><object data="test.pdf" style="width:100%"><a href="test.pdf">PDF laden</a></object></section>
```

looks strange, not full frame, no handlers

```
<section data-background-iframe="test.pdf" data-background-interactive></section>
```

works but cannot jump to a certain page and cannot style the background.

So I am using now additionally the [Chrome plugin](#) that is based on [pdf.js](#).
