

SOFTWARE

REMOTE CONTROL YOUR REVEAL.JS PRESENTATION

7.11.2019

Add this somewhere at the end of your *presentation.php*

```
function sync() {
$.ajax({url: "position", success: function(e){
    Reveal.slide(e);
    }
});
}
if (!window.location.search.match( /master/gi ) ) {
    setInterval(sync,1000);
    Reveal.configure({
        keyboard: {
            13: null,
            23: null,
            32: null,
            37: null,
            38: null,
            39: null,
            40: null,
            68: null
        }
    });
}
Reveal.addEventListener( 'slidechanged', function(e) {
    $.ajax({
        url: "write.php",
        type: "get",
        data: {"k":e.indexh}
    });
});
});
```

write.php

```
$fp = fopen('position', 'w+');
$k=$get["k"];
fwrite($fp, $k);
fclose($fp);
```

presentation.php?master will control the presentation. A simple *presentation.php* even at a dozen locations will show it.
