# HOW TO SAVE A TWITTER THREAD

5.01.2021

This is not a trivial task as most browser produce garbage when printing to pdf. Also screenshots do not help so much with multipage threads. “Unroll” also doesn’t work reliable.

So I have been using the archive.today plugin before producing the pdf, but this method is time consuming as it needs a captcha.

Having now Selenium running in a docker container, there is a more convenient solution where just two lines of [R](#) are sufficient

```
remDr$navigate("https://twitter.com/SZ_Muenchen/status/1346425350394236930")
remDr$screenshot(file = 'screen.png')
```

Login is also possible as explained at [github...](#)

```
username <- remDr$findElement(using = "name", value =  
"session[username_or_email]")  
username$sendKeysToElement(list("XXX"))  
passwd <- remDr$findElement(using = "name", value =  
"session[password]")  
passwd$sendKeysToElement(list("XXX", "\uE007"))
```
