HOW TO STREAM FROM YOUR PHONE

14.02.2023

Wireless transmission worked perfect for me with Elgato's EpocCam transmission from iPhone to Macbook where I am using [OBS](#) . And well, the native USB connection works now out of the box since macOS 13 Ventura.

But how to attach the mobile cam under Linux? [So far I connected only DSLRs](#) but found only recently [DroidCam](#) that includes not only [Android](#) and [iPhone](#) but also [a Linux client](#). As a bonus multiple remote actions are possible from setting white balance to focus mode or using flash settings.
