

SOFTWARE

GPSLESS THEFT PROTECTION WITH A MOBILE ROUTER

26.05.2023

After some try and error, I am invoking now an own startup script on a [Teltonika RU950 router](#)

```
opkg install nano
nano -saveonexit /etc/rc.local
source /etc/myscript.sh
CTRL+x
```

and here is the script

```
touch /etc/myscript.sh
chmod +x /etc/myscript.sh
nano -saveonexit /etc/myscript.sh
```

sending the following variables

```
cellid=$(gsmctl -C)
op=$(gsmctl -o)
lac=$(gsmctl -A 'AT+CGREG?' | cut -d'"' -f 2)
gsmctl -sms -send "0049***** @op @lac $cellid"
CTRL+x
```
