

NOTEWORTHY

ON CRITICISM OF A SCIENTIFIC PAPER

1.04.2024

There is a great piece at <https://statmodeling.stat.columbia.edu/>

It reports “all the stupid things that researchers say in order to deflect legitimate criticism”

The corrections do not affect the main results of the paper...

The criticism should be dismissed because the critics are
obsessive/Stasi/terrorists...

The critics are jealous losers sniping at their betters...

The criticism is illegitimate if it does not go through the peer-review
process...
