# HOW TO INTEGRATE WORDPRESS IN ANOTHER WEBSITE

7.05.2024

In another [website](#) constructed more than a decade ago, I integrated WordPress pages just as iframe .This was quite common at that time but not very elegant as all the formatting had to be adjusted to the parent site for a coherent view. When revising the website last week I have chosen a radical different approach by completely silencing the WP output using a plugin

```
<?php
/** Plugin Name: shutup */
add_action( 'template_redirect', function() {
    wp_die( __( 'disabled' ) );
});
?>
```

WP pages and posts are retrieved in the main website using the WP API only

```
$api_url = 'https://www.DOMAIN.de/BLOGNAME/wp-json/wp/v2/pages/xxxx';
$response = file_get_contents($api_url);
$posts = json_decode($response);
echo $posts->content->rendered;
```
