

NOTEWORTHY

# DROSOPHILA'S BRAIN

30.10.2024

I couldn't [agree more with the comment](#) on the new brain mapping study where the comments reminds me to many critical comments on the [Human Genome Project](#)

Analogies to whole-genome sequencing are apt: neither the genome nor the connectome alone can solve the problem, but they provide a structural foundation from which functional insights can arise.
