

NOTEWORTHY

# LLMS FOR GENETICS

19.11.2024

While I am not so much impressed by the new [Science paper](#) about sequence design – it's a bit premature if we have a function only for 1% of the genome – I am more excited about [tatta.bio](#) who [published a paper earlier this year](#).

Or some other [grammar of live papers](#).

I searched for [IKZF3](#) at [Gaia](#) but maybe this search is already too difficult with a zinc finger that can interact with so many other molecules. Maybe some less challenging search would have been better to judge the results?

BTW – Here is a book recommendation – best in class!
