NOTEWORTHY

LLMS FOR GENETICS

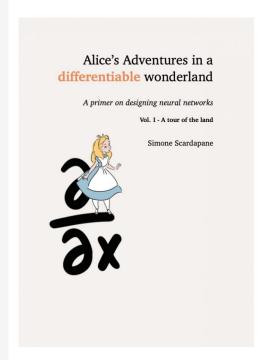

19.11.2024

While I am not so much impressed by the new <u>Science paper</u> about sequence design – it's a bit premature if we have a function only for 1% of the genome – I am more excited about <u>tatta.bio</u> who <u>published a paper earlier this year</u>.

Or some other grammar of live papers.

I searched for <u>IKZF3</u> at <u>Gaia</u> but maybe this search is already to difficult with a zinc finger that can interact with so many other molecules. Maybe some less challenging search would have been better to judge the results?

BTW - Here is a book recommendation - best in class!
