

JOKE, SOFTWARE

# TOO MANY AI POWERED SCIENTIFIC SEARCH ENGINES

20.11.2024

Being a regular [Scholar](#) user, I am quite lost now with the many new scientific search engines. They don't tell us which data they used for training, how they have been trained and how the results have been validated. The field is also highly dynamic when compared to the situation [2 years ago](#). Is it worth to test them?

Undermind

## Radically better research, radically faster

Our AI assistant carefully reads hundreds of academic papers for you, finding exactly what you need, no matter how complex.

The screenshot shows the Scite AI website interface. At the top, there is a navigation bar with the Scite logo, a search bar containing "Assistant", and links for "Product", "Solutions", "Pricing", "Blog", "Log In", and "Sign Up". The main heading is "AI for Research". Below it, a sub-heading reads "Ask our AI Assistant or search the literature to transform the way you discover, evaluate, and understand research on any topic." There are two buttons: "Start free 7-day trial" and "Ask a question". The central part of the interface features a chat window with a question: "How does the structure of a protein affect its function?". The AI assistant's response explains that proteins are essential for biological functions and their structure is determined by their amino acid sequence. It mentions that hydrophobic methyl groups link the backbone to the charged functionality of amino acids, affecting protein structure stability. It also discusses protein secondary structures like  $\beta$ -sheet structures and intrinsically disordered proteins (IDPs). To the right of the chat window, there are two reference cards. Reference #1 is titled "Larger charged amino acids favor  $\beta$ -strand formation in halpin peptides" and Reference #2 is titled "Understanding protein non-folding".

The screenshot shows the homepage of the Consensus AI Search Engine for Research. At the top left is the Consensus logo, and at the top right is a 'Login' button with a menu icon. The main heading is 'AI Search Engine for Research' in a large, dark font. Below the heading is the tagline 'Find & understand the best science, faster.' A large search bar with the placeholder text 'Ask the research...' and a magnifying glass icon is centered. Below the search bar are four example search queries, each with a small icon and a magnifying glass: 'Does exercise improve cognition?', 'Can cash transfers reduce poverty?', 'Are statins effective in the elderly?', and 'Can mindfulness help with sleep?'. At the bottom of the search area is a link that says 'Try an example search'.

The screenshot shows the homepage of the Elicit website. The top navigation bar includes the Elicit logo, links for 'Features', 'Testimonials', 'Pricing', 'FAQ', 'Careers', 'Sign In', and a prominent 'Sign Up' button. The main heading is 'Analyze research papers at superhuman speed' in a large, bold, dark font. Below the heading is the text 'Automate time-consuming research tasks like summarizing papers, extracting data, and synthesizing your findings.' A 'Sign Up' button is centered, with 'Or' and a 'Learn More' link below it. A white rounded rectangle contains the text 'TRUSTED BY RESEARCHERS AT'. Below this are logos for 'gov.uk', 'Google', 'Stanford', 'THE WORLD BANK', and 'NASA'.
