JOKE, PHILOSOPHY

LLM CRAZYNESS

7.07.2025

We do not need to discuss all dystopic X posts about LLMs.

Elon Musk @elonmusk

We will use Grok 3.5 (maybe we should call it 4), which has advanced reasoning, to rewrite the entire corpus of human knowledge, adding missing information and deleting errors.

Then retrain on that.

Far too much garbage in any foundation model trained on uncorrected data.

Whenever Nature Mag, however, publishes nonsense like "A foundation model to predict and capture human cognition" this may deserve a comment...
Fortunately Science's Cathleen O'Grady [already commented](#)

"I think there's going to be a big portion of the scientific community that will view this paper very skeptically and be very harsh on it" says Blake Richards, a computational neuroscientist at McGill University ... Jeffrey Bowers, a cognitive scientist at the University of Bristol, thinks the model is "absurd". He and his colleagues tested Centaur ... and found decidedly un-humanlike behavior."

The claim is absurd as training set of 160 psych studies was way to small to cover even a minor aspect of human behavior.

And well, a large fraction of the 160 published [study findings are probably wrong](#) as may be assumed from another replications study in psych field

Ninety-seven percent of original studies had significant results … Thirty-six percent of replications had significant results.
