THE APPLE KEYNOTE FEATURE WE HAVE BEEN WAITING FOR

22.10.2021

Apple updated last month Keynote with a feature we have been waiting for years - live video which is super cool to show live internet pages from active polls.

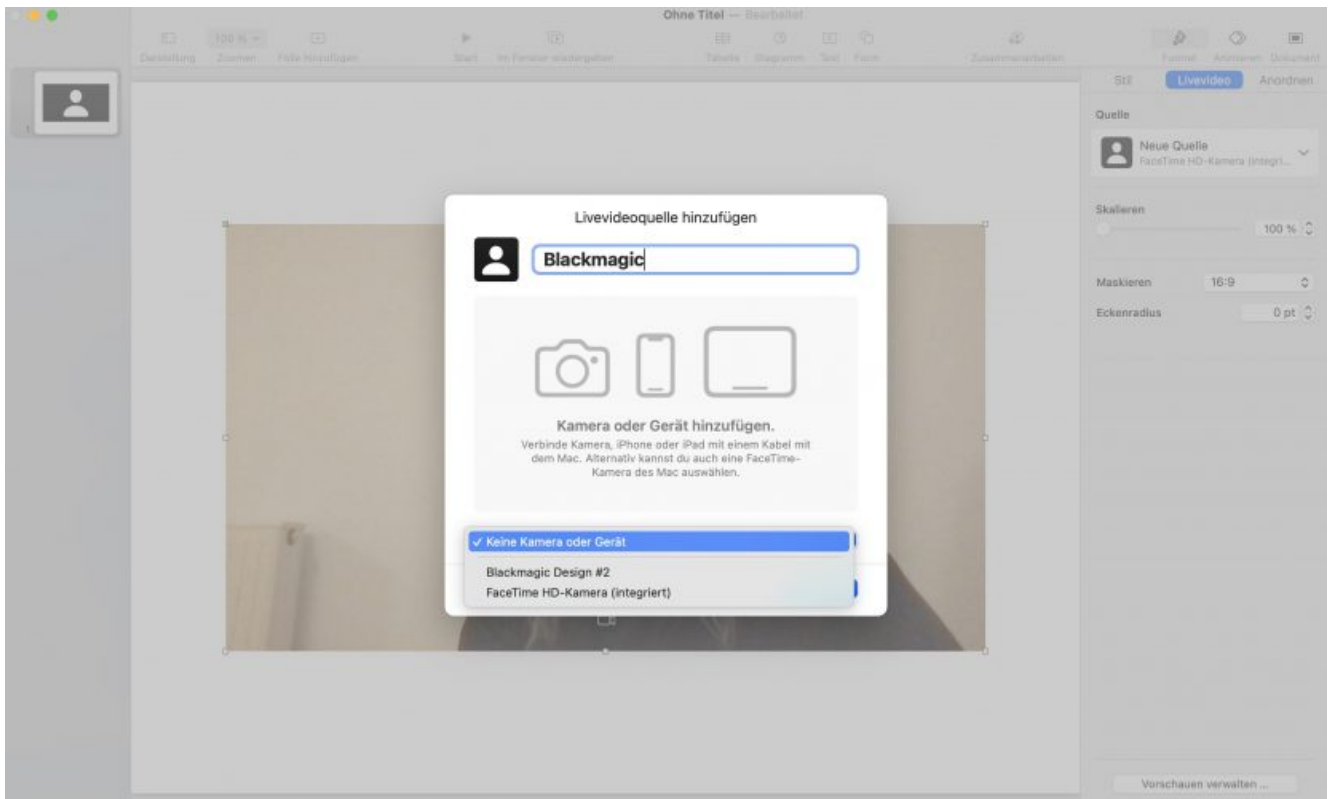

insert video only works from the top menu

There is no video source connected at the beginning but can be added from the right side menu.

Unfortunately the [virtual camera of OBS](#) is not recognized but I could easily connect my [Blackmagic Atem Mini](#) so I have direct access to any source coming from a second comput-

er running Chrome, Ipad with Sketchbook and of course the Z6 HDMI video signal.

adding the ATEM Mini from the right menu
